Warning notice system

This manual contains notices you have to observe in order to ensure your personal safety, as well as to prevent damage to property. The notices referring to your personal safety are highlighted in the manual by a safety alert symbol, notices referring only to property damage have no safety alert symbol. These notices shown below are graded according to the degree of danger.

⚠ **DANGER**
indicates that death or severe personal injury **will** result if proper precautions are not taken.

⚠ **WARNING**
indicates that death or severe personal injury **may** result if proper precautions are not taken.

⚠ **CAUTION**
indicates that minor personal injury can result if proper precautions are not taken.

NOTICE
indicates that property damage can result if proper precautions are not taken.

If more than one degree of danger is present, the warning notice representing the highest degree of danger will be used. A notice warning of injury to persons with a safety alert symbol may also include a warning relating to property damage.

Qualified Personnel

The product/system described in this documentation may be operated only by **personnel qualified** for the specific task in accordance with the relevant documentation, in particular its warning notices and safety instructions. Qualified personnel are those who, based on their training and experience, are capable of identifying risks and avoiding potential hazards when working with these products/systems.

Proper use of Siemens products

Note the following:

⚠ **WARNING**
Siemens products may only be used for the applications described in the catalog and in the relevant technical documentation. If products and components from other manufacturers are used, these must be recommended or approved by Siemens. Proper transport, storage, installation, assembly, commissioning, operation and maintenance are required to ensure that the products operate safely and without any problems. The permissible ambient conditions must be complied with. The information in the relevant documentation must be observed.

Introduction

1

SCALANCE X devices can be configured using TIA Portal Openness. Complex and scalar data types are used for this purpose.

Tables in the TIA Portal are linked with complex data types. The other interface elements are linked with scalar data types.

The following sections describe the four most important applications for complex data types:

- Creating a new row
- Deleting a row
- Querying a parameter
- Setting a parameter

Both scalar and complex data types are used in these applications.

Basic knowledge required

To understand the following contents, general knowledge of automation engineering and identification systems and of TIA Portal Openness is required.

Additional information

You can find detailed information on TIA Portal Openness in the "Automating projects with scripts" help. This help also contains specific programming examples (see also sections "Functions of projects and project data" and "Functions for calling devices, networks and connections").

You can find information on the configuration limits of the devices in the TIA Portal online help (section "Configuring SCALANCE X / W / M").

Requirement

- The Openness application is connected to the TIA Portal.
- A project is open.
- To compile the project, all devices have to be offline.

Validity

This description applies to the following firmware versions and products:

- As of firmware version 4.2, the following SCALANCE devices:
  - SCALANCE XB-200
  - SCALANCE XC-200
  - SCALANCE XF-200
  - SCALANCE XP-200
  - SCALANCE XR-300WG
- As of firmware version 6.2, the following SCALANCE devices:
  - SCALANCE XM-400
  - SCALANCE XR-500

Conventions

2

Commands for configuring complex data types with SCALANCE devices are illustrated according to the following syntax rules:

Convention	Description	Example
Font	All commands are displayed in a non-proportional font.	`var result_create = DNSClientTable.Rows.Create();`
User-defined values	For some parameters, a user-defined value is necessary. Values that need to be defined by you are shown in curly brackets, e.g.: • The number of a row • An IP address • An index • A string, for example a name or a description • A parameter and possibly the value of the parameter Always replace the curly brackets also. They are **not** part of the syntax of TIA Portal Openness.	`DNSClientTable.Rows[{row}].Delete();`
		`item_XM400.SetAttribute("DnsServerAddress", "{IP address}");`
		`item_XM400.SetAttribute("NtpServerIndex", {index value});`
		`LinkAggregationGeneralTable.Rows[{row}].SetAttribute("LinkAggregationCustomName", "{name}");`
		`SNMPTrapsTable.Rows[{row}].SetAttribute("{parameter}", "{value}");`

DNS Client

3

3.1 Parameters

The following table shows the parameters of the DNS Client table:

Parameter name in TIA Portal	Parameter type in TIA Portal	Parameter name in Openness	Parameter type in Openness	Parameter value in Openness	Default access	Description
DNS Client	Table	DnsClientTable	TableData	-	R/W	-
DNS Server Address	Textbox	DnsServerAddress	String	Example: 192.168.3.4	R	Shows the IP address of the DNS server.
Origin	Textbox	DnsClientOrigin	String	manual learned	R	Shows whether the DNS server was configured manually or was assigned by DHCP.

3.2 Creating a New Row

An index is automatically assigned to a new row. If you delete a row and then create a new row, the new row receives the index of the deleted row. A new row is not necessarily added to the end of the table. The index values are sorted in ascending order.

The number of rows you can create depends on the firmware version of the SCALANCE device. If you exceed the maximum number of rows, no error message is output. To ensure that a row has been created, we recommend counting the number of rows.

Note

Values of a row cannot be changed

Once you have created a row, you can no longer change the values of the row.

If the values of a row need to be changed, you have to delete the row and create a new row.

To create a new row in the DNS Client table, follow these steps:

Step	Description	Command
1	Initiate the DNS Client table.	`TableData DNSClientTable = item_XM400.GetAttribute("DnsClientTable") as TableData;`
2	Assign an IP address for the **DnsServerAddress** parameter (scalar data type).	`item_XM400.SetAttribute("DnsServerAddress", "{IP address}");`
3	[Optional] Check the value of the **DnsServerAddress** parameter.	`var DNSServerAddress = item_XM400.GetAttribute("DnsServerAddress");`

Step	Description	Command
4	Create a new row. The IP address configured as scalar data type for the **DnsServerAddress** parameter is transferred to the complex data type of the same name.	`var result_create = DNSClientTable.Rows.Create();`
5	[Optional] Check the number of rows.	`var cnt = DNSClientTable.Rows.Count();`

Example

In this example, three rows are created one after another. The following IP addresses are assigned for the **DnsServerAddress** parameter:

- `192.168.3.9`
- `172.168.3.7`
- `152.168.3.5`

```
TableData DNSClientTable = item_XM400.GetAttribute("DnsClientTable")
as TableData;
item_XM400.SetAttribute("DnsServerAddress", "192.168.3.9");
var DNSServerAddress = item_XM400.GetAttribute("DnsServerAddress");
var result_create = DNSClientTable.Rows.Create();
item_XM400.SetAttribute("DnsServerAddress", "172.168.3.7");
result_create = DNSClientTable.Rows.Create();
item_XM400.SetAttribute("DnsServerAddress", "152.168.3.5");
result_create = DNSClientTable.Rows.Create();
```

Example

Row 1 is deleted first in this example. For more information on deleting a row, see "Deleting a Row (Page 11)".

```
DNSClientTable.Rows[1].Delete();
DNSClientTable = item_XM400.GetAttribute("DnsClientTable") as
TableData;
```

A new row is then created. The new row automatically receives the index of the previously deleted row: 1.

```
item_XM400.SetAttribute("DnsServerAddress", "182.168.3.4");
result_create = DNSClientTable.Rows.Create();
```

3.3 Deleting a Row

To delete a row in the DNS Client table, follow these steps:

Step	Description	Command
1	Delete the required row.	`DNSClientTable.Rows[{row}].Delete();`
2	[Optional] Update the variable.	`DNSClientTable = item_XM400.GetAttribute("DnsClientTable") as TableData;`
3	[Optional] Check the number of rows.	`cnt = DNSClientTable.Rows.Count();`

Example

Row 1 of the DNS Client table is deleted in this example.

```
DNSClientTable.Rows[1].Delete();
DNSClientTable = item_XM400.GetAttribute("DnsClientTable") as
TableData;
```

3.4 Querying a Parameter

To query a parameter of the DNS Client table, execute the following command:

```
var DnsClientAddress_1 =
DNSClientTable.Rows[{row}].GetAttribute("{parameter}");
```

Example

In this example, the **DnsClientAddress** parameter from row 1 of the DNS Client table is queried.

```
var DnsClientAddress_1 =
DNSClientTable.Rows[1].GetAttribute("DnsClientAddress");
```

In this example, the **DnsClientOrigin** parameter from row 1 of the DNS Client table is queried.

```
var DnsClientorigin_1 =
DNSClientTable.Rows[1].GetAttribute("DnsClientOrigin");
```

SNMP Traps

4

4.1 Parameters

The following table shows the parameters of the SNMP Traps table:

Parameter name in TIA Portal	Parameter type in TIA Portal	Parameter name in Openness	Parameter type in Openness	Parameter value in Openness	Default access	Description
SNMP Traps	Table	SnmpTrapsTable	TableData	-	R/W	The table is now available for SCALANCE XM-400 with firmware version 6.4.
Trap Receiver Address	Textbox	SnmpTrapsIpAddress	String	Example: 192.168.3.4	R/W	Enter the IP address or the FQDN (Fully Qualified Domain Name) of the station to which the device sends SNMP traps.
Trap	Checkbox	SnmpTrapTargetStatus	Boolean	true false	R/W	Enable or disable the sending of SNMP traps. Stations that are entered but not selected do not receive SNMP traps.

4.2 Creating a New Row

An index is automatically assigned to a new row. If you delete a row and then create a new row, the new row receives the index of the deleted row. A new row is not necessarily added to the end of the table. The index values are sorted in ascending order.

The number of rows you can create depends on the firmware version of the SCALANCE device. If you exceed the maximum number of rows, no error message is output. To ensure that a row has been created, we recommend counting the number of rows.

To create a new row in the SNMP Traps table, follow these steps:

Step	Description	Command
1	Initiate the SNMP Traps table.	`TableData SNMPTrapsTable = item_XC200.GetAttribute("SnmpTrapsTable") as TableData;`
2	Assign an IP address for the **SnmpTrapsIpAddress** parameter (scalar data type).	`item_XC200.SetAttribute("SnmpTrapsIpAddress", "{IP address}");`

Step	Description	Command
3	Create a new row. The IP address configured as scalar data type for the **SnmpTrapsIpAddress** parameter is transferred to the complex data type of the same name.	`var result_create = SNMPTrapsTable.Rows.Create();`
4	[Optional] Check the number of rows.	`var cnt = SNMPTrapsTable.Rows.Count();`

Example

One row is created in this example. The IP address 192.168.3.4 is assigned for the **SnmpTrapsIpAddress** parameter:

```
TableData SNMPTrapsTable = item_XC200.GetAttribute("SnmpTrapsTable")
as TableData;
item_XC200.SetAttribute("SnmpTrapsIpAddress", "192.168.3.4");
var result_create = SNMPTrapsTable.Rows.Create();
```

4.3 Deleting a Row

To delete a row in the SNMP Traps table, follow these steps:

Step	Description	Command
1	Delete the required row.	`SNMPTrapsTable.Rows[{row}].Delete();`
2	[Optional] Update the variable.	`SNMPTrapsTable = item_XC200.GetAttribute("SnmpTrapsTable") as TableData;`
3	[Optional] Check the number of rows.	`cnt = SNMPTrapsTable.Rows.Count();`

Example

Row 0 of the SNMP Traps table is deleted in this example.

```
SNMPTrapsTable.Rows[0].Delete();
SNMPTrapsTable = item_XC200.GetAttribute("SnmpTrapsTable") as
TableData;
```

4.4 Querying a Parameter

To query a parameter of the SNMP Traps table, execute the following command:

```
var SnmpTrapAddress =
SNMPTrapsTable.Rows[{row}].GetAttribute("{parameter}");
```

Example

In this example, the **SnmpTrapAddress** parameter from row 0 of the SNMP Traps table is queried.

```
var SnmpTrapAddress =
SNMPTrapsTable.Rows[0].GetAttribute("SnmpTrapsIpAddress");
```

4.5 Setting a Parameter

To set a parameter of the SNMP Traps table, execute the following command:

```
SNMPTrapsTable.Rows[{row}].SetAttribute("{parameter}", {value});
```

Example

In this example, the **SnmpTrapTargetStatus** parameter from row 0 of the SNMP Traps table is set to the value **true**.

```
SNMPTrapsTable.Rows[0].SetAttribute("SnmpTrapTargetStatus", true);
```

NTP Client

5

5.1 Parameters

The following table shows the parameters of the NTP Client table:

Parameter name in TIA Portal	Parameter type in TIA Portal	Parameter name in Openness	Parameter type in Openness	Parameter value in Openness	Default access	Description
NTP Client	Table	NtpClientTable	TableData	-	R/W	-
NTP Server Index	Combobox	NtpServerIndex	String	1 2 3 4	R/W	Select the index of the NTP server. The NTP servers are queried in the order of the NTP Server Index. The time of the server that is found first is applied.
NTP Server Address	Textbox	NtpServerAddress	String	Example: 192.168.3.4	R/W	Enter the IPv4 address of the NTP server.
NTP Server Port	Textbox	NtpServerPort	Integer	Example: 123	R/W	Enter the port of the NTP server.
Poll Interval [s]	Textbox	NtpServerPollInterval	Integer	-	R/W	Specify the interval between two time queries. The larger the interval, the more inaccurate the time is. Possible values are 64 to 2592000 seconds (30 days).
Key ID	Textbox	-	-	-	R/W	This parameter is not linked with TIA Portal Openness.
Hash Algorithm	Combobox	-	-	DES MD5 SHA1	R/W	This parameter is not linked with TIA Portal Openness.
Key	Password	-	-	-	R/W	This parameter is not linked with TIA Portal Openness.
Key Confirmation	Password	-	-	-	R/W	This parameter is not linked with TIA Portal Openness.

5.2 Creating a New Row

Not all parameters of the NTP Client table can be configured using TIA Portal Openness. For more information, refer to "Parameters (Page 17)".

The sorting of the NTP Client table is oriented to the **NtpServerIndex** parameter. The index values in this column are sorted in ascending order. When you create a new row, the row is sorted into the existing table according to the index value of the **NtpServerIndex** parameter.

The number of rows you can create depends on the firmware version of the SCALANCE device. If you exceed the maximum number of rows, no error message is output. To ensure that a row has been created, we recommend counting the number of rows.

To create a new row in the NTP Client table, follow these steps:

Step	Description	Command
1	Initiate the NTP Client table.	`TableData NTPClientTable = item_XM400.GetAttribute("NtpClientTable") as TableData;`
2	Assign an index value for the **NtpServerIndex** parameter (scalar data type).	`item_XM400.SetAttribute("NtpServerIndex", {index value});`
3	[Optional] Check the value of the **NtpServerIndex** parameter.	`var NTPServerIndex = item_XM400.GetAttribute("NtpServerIndex");`
4	Create a new row. The index value configured as scalar data type for the **NtpServerIndex** parameter is transferred to the complex data type of the same name.	`var result_create = NTPClientTable.Rows.Create();`
5	[Optional] Check the number of rows.	`var cnt = NTPClientTable.Rows.Count();`

Example

In this example, three rows are created one after another. The following index values are assigned for the **NtpServerIndex** parameter:

- 2
- 3
- 1

```
TableData NTPClientTable = item_XM400.GetAttribute("NtpClientTable")
as TableData;
item_XM400.SetAttribute("NtpServerIndex", 2);
var NTPServerIndex = item_XM400.GetAttribute("NtpServerIndex");
var result_create = NTPClientTable.Rows.Create();
item_XM400.SetAttribute("NtpServerIndex", 3);
result_create = NTPClientTable.Rows.Create();
item_XM400.SetAttribute("NtpServerIndex", 1);
result_create = NTPClientTable.Rows.Create();
```

5.3 Deleting a Row

To delete a row in the NTP Client table, follow these steps:

Step	Description	Command
1	Delete the required row.	`NTPClientTable.Rows[{row}].Delete();`
2	[Optional] Check the number of rows.	`var cnt = NTPClientTable.Rows.Count();`

Example

Row 2 of the NTP Client table is deleted in this example.

```
NTPClientTable.Rows[2].Delete();
```

5.4 Querying a Parameter

To query a parameter of the NTP Client table, execute the following command:

```
var NTPServerAddress_0 =
NTPClientTable.Rows[{row}].GetAttribute("{parameter}");
```

Example

In this example, the **NtpServerAddress** parameter from row 0 of the NTP Client table is queried.

```
var NTPServerAddress_0 =
NTPClientTable.Rows[0].GetAttribute("NtpServerAddress");
```

Example

In this example, the **NtpServerPollInterval** parameter from row 0 of the NTP Client table is queried.

```
var set_NTPServerPollInterval_0 =
NTPClientTable.Rows[0].GetAttribute("NtpServerPollInterval");
```

5.5 Setting a Parameter

To set a parameter of the NTP Client table, execute the following command:

```
NTPClientTable.Rows[{row}].SetAttribute("{parameter}", "{value}");
```

Example

In this example, the **NtpServerAddress** parameter from row 0 of the NTP Client table is set to the value 182.168.2.9.

```
NTPClientTable.Rows[0].SetAttribute("NtpServerAddress",
"182.168.2.9");
```

Example

In this example, the **NtpServerPollInterval** parameter from row 0 of the NTP Client table is set to the value 5.

```
NTPClientTable.Rows[0].SetAttribute("NtpServerPollInterval", 5);
```

Syslog Client

6

6.1 Parameters

The following table shows the parameters of the Syslog Client table:

Parameter name in TIA Portal	Parameter type in TIA Portal	Parameter name in Openness	Parameter type in Openness	Parameter value in Openness	Default access	Description
Syslog Client	Table	SyslogClientTable	TableData	-	R/W	-
Syslog Server Address	Textbox	SyslogServerAddress	String	Example: 192.168.3.4	R/W	Enter the IP address or the FQDN (Fully Qualified Domain Name) of the Syslog server.
Server Port	Textbox	SyslogServerPort	Integer	Example: 514	R/W	Enter the port of the Syslog server being used.

6.2 Creating a New Row

The sorting of the Syslog Client table is oriented to the **SyslogServerAddress** parameter. The IP addresses in this column are sorted in ascending order. When you create a new row, the row is sorted into the existing table according to the IP address of the **SyslogServerAddress** parameter.

The number of rows you can create depends on the firmware version of the SCALANCE device. If you exceed the maximum number of rows, no error message is output. To ensure that a row has been created, we recommend counting the number of rows.

To create a new row in the Syslog Client table, follow these steps:

Step	Description	Command
1	Initiate the Syslog Client table.	`TableData SyslogClientTable = item_XC200.GetAttribute("SyslogClientTable") as TableData;`
2	Assign an IP address for the **SyslogServerAddress** parameter (scalar data type).	`item_XC200.SetAttribute("SyslogServerAddress", "{IP address}");`
3	[Optional] Check the value of the **SyslogServerAddress** parameter.	`var syslogAddress = item_XC200.GetAttribute("SyslogServerAddress");`
4	Create a new row. The IP address configured as scalar data type for the **SyslogServerAddress** parameter is transferred to the complex data type of the same name.	`var result_create = SyslogClientTable.Rows.Create();`
5	[Optional] Check the number of rows.	`var cnt = SyslogClientTable.Rows.Count();`

Example

In this example, two rows are created one after another. The following IP addresses are assigned for the **SyslogServerAddress** parameter:

- 192.158.4.7
- 172.158.4.5

The row with the IP address 172.158.4.5 is sorted in front of the row with IP address 192.158.4.7, even though they were created in a different order.

```
TableData SyslogClientTable =
item_XC200.GetAttribute("SyslogClientTable") asTableData;
item_XC200.SetAttribute("SyslogServerAddress", "192.158.4.7");
var syslogAddress = item_XC200.GetAttribute("SyslogServerAddress");
var result_create = SyslogClientTable.Rows.Create();
item_XC200.SetAttribute("SyslogServerAddress", "172.158.4.5");
result_create = SyslogClientTable.Rows.Create();
```

6.3 Deleting a Row

To delete a row in the Syslog Client table, follow these steps:

Step	Description	Command
1	Delete the required row.	`SyslogClientTable.Rows[{row}].Delete();`
2	[Optional] Check the number of rows.	`cnt = SyslogClientTable.Rows.Count;`

Example

Row 1 of the Syslog Client table is deleted in this example.

```
SyslogClientTable.Rows[1].Delete();
```

6.4 Querying a Parameter

To query a parameter of the Syslog Client table, execute the following command:

```
var serverPort =
SyslogClientTable.Rows[{row}].GetAttribute("{parameter}");
```

Example

In this example, the **SyslogServerPort** parameter from row 1 of the Syslog Client table is queried.

```
var serverPort =
SyslogClientTable.Rows[1].GetAttribute("SyslogServerPort");
```

Example

In this example, the **SyslogServerAddress** parameter from row 1 of the Syslog Client table is queried.

```
var SyslogServerAddress =
SyslogClientTable.Rows[1].GetAttribute("SyslogServerAddress");
```

6.5 Setting a Parameter

To set a parameter of the Syslog Client table, execute the following command:

```
SyslogClientTable.Rows[{row}].SetAttribute("{parameter}", {value});
```

Example

In this example, the **SyslogServerPort** parameter from row 1 of the Syslog Client table is set to the value 502.

```
SyslogClientTable.Rows[1].SetAttribute("SyslogServerPort", 502);
```

Example

In this example, the **SyslogServerAddress** parameter from row 1 of the Syslog Client table is set to the value 122.158.3.6.

```
SyslogClientTable.Rows[1].SetAttribute("SyslogServerAddress",
"122.158.3.6");
```

Link Aggregation

7

7.1 Parameters

The following table shows the parameters of the Link Aggregation table:

Parameter name in TIA Portal	Parameter type in TIA Portal	Parameter name in Openness	Parameter type in Openness	Parameter value in Openness	Default access	Description
Link Aggregation	Table	LinkAggregationTable	TableData	-	R/W	-
Port	Textbox	LinkAggregationPortName	String	-	R	Shows the virtual port number of this link aggregation. This identifier is assigned internally by the firmware.
Link Aggregation Name	Textbox	LinkAggregationCustomName	String	-	R/W	Specify a name for the link aggregation. This name can be specified by the user during configuration. The name is not absolutely necessary but can be useful to distinguish between the various link aggregations.
Status	Checkbox	LinkAggregationAdminStatus	Boolean	true	R/W	Enable or disable the link aggregation.
				false		
MTU	Textbox	LinkAggregationMTU	Integer	-	R/W	Specify the packet size.
LACP	Combobox	LinkAggregationLacpStatus	Enumaration	LinkAggregation LacpStatus.None	R/W	Specify whether LACP frames are sent. • Off Disables the sending of LACP frames. • On Enables the sending of LACP frames.
				LinkAggregation LacpStatus.Off		
				LinkAggregation LacpStatus.On		

Parameter name in TIA Portal	Parameter type in TIA Portal	Parameter name in Openness	Parameter type in Openness	Parameter value in Openness	Default access	Description
Frame Distribution	Combobox	LinkAggregationFrameDistribution	Enumaration	LinkAggregation FrameDistribution.None	R/W	Set the type of distribution of packets to the individual links of an aggregation. • Destination&Source Mac The distribution is based on a combination of the destination and source MAC address. • Destination&Source IP-MAC The distribution is based on a combination of the destination and source IP address and MAC address.
				LinkAggregation FrameDistribution.DestinationSourceMAC		
				LinkAggregation FrameDistribution. DestinationSourceIPMAC		
VLAN Mode	Combobox	LinkAggregationVlanMode	Enumaration	LinkAggregation VlanMode.None	R/W	Specify how the link aggregation is entered in a VLAN: • Hybrid The link aggregation sends tagged and untagged frames. It is not automatically a member of a VLAN. • Trunk The link aggregation only sends tagged frames and is automatically a member of all VLANs. • Access The port belongs to a provider switch that supports the function Q-in-Q VLAN Tunnel.
				LinkAggregation VlanMode.Hybrid		
				LinkAggregation VlanMode.Trunk		
				LinkAggregation VlanMode.Access		

Parameter name in TIA Portal	Parameter type in TIA Portal	Parameter name in Openness	Parameter type in Openness	Parameter value in Openness	Default access	Description
List of ports	Combobox	LinkAggregation-PortList	List<int>	LinkAggregation PortState.None LinkAggregation PortState.Active LinkAggregation PortState.Deactivated LinkAggregation PortState.Passive LinkAggregation PortState.On	R/W	Shows the ports that belong to this link aggregation. The following values can be selected from the drop-down list: • "a" (active) The port sends LACP frames and is only involved in the link aggregation when LACP frames are received. • "-" (deactivated) Link aggregation is disabled. • "p" (passive) The port is only involved in the link aggregation when LACP frames are received. • "o" (on) The port is involved in the link aggregation and does not send any LACP frames.

7.2 Creating a New Row

When you create a new row, the **Port** parameter is filled automatically. The AG1 name is assigned for the first row. For all subsequent rows, the number is increased by 1, i.e. AG2, AG3 etc. The sorting of the Link Aggregation table is based on the **Port** parameter. The names in this column are sorted in ascending order.

If you delete a row and then create a new row, the new row receives the name of the deleted row. A new row is not necessarily added to the end of the table.

The number of rows you can create depends on the firmware version of the SCALANCE device. If you exceed the maximum number of rows, no error message is output. To ensure that a row has been created, we recommend counting the number of rows.

To create a new row in the Link Aggregation table, follow these steps:

Step	Description	Command
1	Initiate the Link Aggregation table.	`TableData LinkAggregationGeneralTable = item_XM400.GetAttribute("LinkAggregationTable") as TableData;`
2	Create a new row.	`var result_create = LinkAggregationGeneralTable.Rows.Create();`
3	[Optional] Check the number of rows.	`var cnt = LinkAggregationGeneralTable.Rows.Count();`

Example

One row is created in this example.

```
TableData LinkAggregationGeneralTable =
item_XM400.GetAttribute("LinkAggregationTable") as TableData;
var result_create = LinkAggregationGeneralTable.Rows.Create();
```

7.3 Deleting a Row

To delete a row in the Link Aggregation table, follow these steps:

Step	Description	Command
1	Delete the required row.	`LinkAggregationGeneralTable.Rows[{row}].Delete();`
2	[Optional] Check the number of rows.	`cnt = LinkAggregationGeneralTable.Rows.Count();`

Example

Row 0 of the Link Aggregation table is deleted in this example.

```
LinkAggregationGeneralTable.Rows[0].Delete();
```

7.4 Querying a Parameter

To query a parameter of the Link Aggregation table, execute the following command:

```
var laPortName =
LinkAggregationGeneralTable.Rows[{row}].GetAttribute("{parameter}");
```

Example

In this example, the **LinkAggregationCustomName** parameter from row 1 of the Link Aggregation table is queried.

```
var LaCustomName =
LinkAggregationGeneralTable.Rows[1].GetAttribute("LinkAggregationCustomName");
```

Example

In this example, the **LinkAggregationVlanMode** parameter from row 1 of the Link Aggregation table is queried.

```
var LaVlanMode =
LinkAggregationGeneralTable.Rows[1].GetAttribute("LinkAggregationVla
nMode");
```

7.5 Setting a Parameter

To set a parameter of the Link Aggregation table, execute the following command:

```
LinkAggregationGeneralTable.Rows[{row}].SetAttribute("{parameter}",
"{value}");
```

Example

In this example, the **LinkAggregationCustomName** parameter from row 1 of the Link Aggregation table is set to the value "Custom Name1".

```
LinkAggregationGeneralTable.Rows[1].SetAttribute("LinkAggregationCus
tomName", "Custom Name1");
```

Example

In this example, the **LinkAggregationVlanMode** parameter from row 1 of the Link Aggregation table is set to the value "LinkAggregationVlanMode.Hybrid".

```
LinkAggregationGeneralTable.Rows[1].SetAttribute("LinkAggregationVla
nMode",LinkAggregationVlanMode.Hybrid);
```

7.6 Setting the State of Ports

When you have created a new row, you need to specify a state for each port. The number of ports depends on your SCALANCE device. The description and the example assume a SCALANCE device with eight ports. For this reason, exactly eight states are set.

To set the state of the ports in the Link Aggregation table, execute the following command:

```
List<int> newPortList_LA = new List<int>() { (int){state}, (int)
{state}, (int){state}, (int){state}, (int){state}, (int){state},
(int){state}, (int){state} };
```

Example

In this example, the state is set in the Link Aggregation table for all eight ports of a SCALANCE device.

```
List<int> newPortList_LA = new List<int>()
{ (int)LinkAggregationPortState.Active,
(int)LinkAggregationPortState.Active,
(int)LinkAggregationPortState.None,
(int)LinkAggregationPortState.None,
(int)LinkAggregationPortState.Passive,
(int)LinkAggregationPortState.None,
(int)LinkAggregationPortState.None,
(int)LinkAggregationPortState.None };
```

Warning notice system

This manual contains notices you have to observe in order to ensure your personal safety, as well as to prevent damage to property. The notices referring to your personal safety are highlighted in the manual by a safety alert symbol, notices referring only to property damage have no safety alert symbol. These notices shown below are graded according to the degree of danger.

⚠ DANGER

indicates that death or severe personal injury **will** result if proper precautions are not taken.

⚠ WARNING

indicates that death or severe personal injury **may** result if proper precautions are not taken.

⚠ CAUTION

indicates that minor personal injury can result if proper precautions are not taken.

NOTICE

indicates that property damage can result if proper precautions are not taken.

If more than one degree of danger is present, the warning notice representing the highest degree of danger will be used. A notice warning of injury to persons with a safety alert symbol may also include a warning relating to property damage.

Qualified Personnel

The product/system described in this documentation may be operated only by **personnel qualified** for the specific task in accordance with the relevant documentation, in particular its warning notices and safety instructions. Qualified personnel are those who, based on their training and experience, are capable of identifying risks and avoiding potential hazards when working with these products/systems.

Proper use of Siemens products

Note the following:

⚠ WARNING

Siemens products may only be used for the applications described in the catalog and in the relevant technical documentation. If products and components from other manufacturers are used, these must be recommended or approved by Siemens. Proper transport, storage, installation, assembly, commissioning, operation and maintenance are required to ensure that the products operate safely and without any problems. The permissible ambient conditions must be complied with. The information in the relevant documentation must be observed.

Trademarks

All names identified by ® are registered trademarks of Siemens AG. The remaining trademarks in this publication may be trademarks whose use by third parties for their own purposes could violate the rights of the owner.

Disclaimer of Liability

We have reviewed the contents of this publication to ensure consistency with the hardware and software described. Since variance cannot be precluded entirely, we cannot guarantee full consistency. However, the information in this publication is reviewed regularly and any necessary corrections are included in subsequent editions.

Openness for SIMATIC Ident

1

SIMATIC Ident devices (communication modules, RF600 reader and MV400/MV500 readers) can be configured with TIA Portal Openness. The following sections provide an overview of the module-specific parameters.

Basic knowledge required

The following passages assume you have general knowledge of automation engineering and identification systems, as well as TIA Portal Openness.

Additional information

You can find detailed information on TIA Portal Openness in the help "Automating projects with scripts". This help contains concrete program examples (see sections "Functions of projects and project data" and "Functions for accessing devices, networks and connections").

Requirement

- The Openness application is connected to the TIA Portal.
- A project is open.
- All devices must be offline to compile the project.

ASM 456

2

The Openness parameters for the "ASM 456" module are described below.

Table 2-1 Parameters of the "ASM 456" module; "Word: 2 IN/OUT DP-V1" module

Parameters in the configuration (TIA Portal)	Parameters in Openness	Data type in Openness	Parameter value in the configuration (TIA Portal)	Parameter value in Openness	Default access	Description
User mode	UserMode	ulong	Ident profile/ RFID standard profile	3	R/W	Selection depends on the communications module and Ident system being used. With this parameter, you select the block: • Ident profile/RFID standard profile: The program block for the Ident profile/RFID standard profile is used on the controller. • FB 45 / FC 45: Single tag mode FB 45 (PROFIBUS/PROFINET) or FC 45 (PROFIBUS) is used on the controller. • FB 55 / FC 55: Multitag mode. FB 55 (PROFIBUS/PROFINET) or FC 55 (PROFIBUS) is used on the controller. • FC 56 File handler for S7-300 and S7-400
			FB 45 / FC 45	1	R/W	
			FB 55 / FC 55	4	R/W	
			FC 56	5	R/W	

Parameters in the configuration (TIA Portal)	Parameters in Openness	Data type in Openness	Parameter value in the configuration (TIA Portal)	Parameter value in Openness	Default access	Description
MOBY mode	MobyMode	ulong	RF200/RF300/RF600; MV4x0; MOBY U/D	5	R/W	Selection depends on the communications module and Ident system being used. With this parameter, you set the mode of the communications module. • RF200/RF300/RF600; MV4x0; MOBY U/D • MOBY I/E normal addressing • RF300 filehandler • MOBY U file handler • MOBY I file handler Normal addressing: The transponder is addressed with physical addresses. Filehandler: Prior to use, the transponder needs to be formatted.
			MOBY I/E normal addressing	1	R/W	
			RF300 filehandler	149	R/W	
			MOBY U file handler	133	R/W	
			MOBY I file handler	129	R/W	
Transmission speed	BaudRate	ulong	19.2 kBd	9	R/W	Selection depends on the communications module and Ident system being used. With this parameter, you set the transmission speed between the communications module and reader. When the RFID reader is connected: After changing the transmission speed, the reader must be turned off and on again (cycle power). When an optical reader is connected: The transmission speed selected here must match the transmission speed selected in the firmware of the reader.
			57.6 kBd	13	R/W	
			115.2 kBd	14	R/W	

Parameters in the configuration (TIA Portal)	Parameters in Openness	Data type in Openness	Parameter value in the configuration (TIA Portal)	Parameter value in Openness	Default access	Description
Diagnostics messages	Diagnostic-Messages	int	None	1	R/W	Selection depends on the communications module and Ident system being used. With this parameter, you set whether hardware diagnostics messages will be reported. • None: Apart from standard diagnostics, no other alarms are generated. • Hard errors: Critical hardware errors are reported by the S7 diagnostics. • Hard/soft errors low priority Critical hardware errors and errors that occur during command processing are reported by the S7 diagnostics. The "Ext_Diag" bit is not set. • Hard/soft errors high priority Critical hardware errors and errors that occur during command processing are reported by the S7 diagnostics. The "Ext_Diag" bit is set.
			Hard errors	2	R/W	
			Hard/soft errors low priority	3	R/W	
			Hard/soft errors high priority	5	R/W	
Suppression of Error LED	SuppressionOfErrorLed	int	None	0	R/W	Disabling the Error LED (ERR) of a channel. The communications module has two channels to which the readers / optical readers can be connected. The Error LED of the other channel flashes permanently when only one of the channels is being used. With the help of the suppression, you can disable the Error LED of the unused channel.
			Channel 1	1	R/W	
			Channel 2	2	R/W	

Table 2-2 Parameters of the "ASM 456" module; "RF680R/RF685R" module

Parameters in the configuration (TIA Portal)	Parameters in Openness	Data type in Openness	Parameter value in the configuration (TIA Portal)	Parameter value in Openness	Default access	Description
User mode	UserMode	ulong	Ident profile/ RFID standard profile	3	R	Selection depends on the communications module and Ident system being used. With this parameter, you select the block: • Ident profile/RFID standard profile: The program block for the Ident profile/RFID standard profile is used on the controller.
MOBY mode	MobyMode	ulong	RF680R/ RF685R	32	R	Selection depends on the communications module and Ident system being used. With this parameter, you set the mode of the communications module. • RF680R/RF685R Normal addressing: The transponder is addressed with physical addresses. Filehandler: Prior to use, the transponder needs to be formatted.
Transmission speed	BaudRate	ulong	115.2 kBd	14	R	Selection depends on the communications module and Ident system being used. With this parameter, you set the transmission speed between the communications module and reader. When the RFID reader is connected: After changing the transmission speed, the reader must be turned off and on again (cycle power). When an optical reader is connected: The transmission speed selected here must match the transmission speed selected in the firmware of the reader.

Parameters in the configuration (TIA Portal)	Parameters in Openness	Data type in Openness	Parameter value in the configuration (TIA Portal)	Parameter value in Openness	Default access	Description
Diagnostics messages	Diagnostic-Messages	int	None	1	R/W	Selection depends on the communications module and Ident system being used. With this parameter, you set whether hardware diagnostics messages will be reported. • None: Apart from standard diagnostics, no other alarms are generated. • Hard errors: Critical hardware errors are reported by the S7 diagnostics. • Hard/soft errors low priority Critical hardware errors and errors that occur during command processing are reported by the S7 diagnostics. The "Ext_Diag" bit is not set. • Hard/soft errors high priority Critical hardware errors and errors that occur during command processing are reported by the S7 diagnostics. The "Ext_Diag" bit is set.
			Hard errors	2	R/W	
			Hard/soft errors low priority	3	R/W	
			Hard/soft errors high priority	5	R/W	
Suppression of Error LED	SuppressionOfErrorLed	int	None	0	R/W	Disabling the Error LED (ERR) of a channel. The communications module has two channels to which the readers / optical readers can be connected. The Error LED of the other channel flashes permanently when only one of the channels is being used. With the help of the suppression, you can disable the Error LED of the unused channel.
			Channel 1	1	R/W	
			Channel 2	2	R/W	

ASM 475

3

The Openness parameters for the "ASM 475" module are described below.

Table 3-1 Parameters of the module "ASM 475"

Parameters in the configuration (TIA Portal)	Parameters in Openness	Data type in Openness	Parameter value in the configuration (TIA Portal)	Parameter value in Openness	Default access	Description
MOBY mode	MobyMode	ulong	MOBY I/E/F normal addressing	1	R/W	Selection depends on the communications module and Ident system being used. With this parameter, you set the mode of the communications module. • MOBY I/E/F normal addressing • MOBY I file handler • RF200/RF300/RF600; MOBY U/D normal addressing • MOBY U file handler Normal addressing: The transponder is addressed with physical addresses. Filehandler: Prior to use, the transponder needs to be formatted.
			MOBY I file handler	129	R/W	
			RF200/RF300/RF600; MOBY U/D normal addressing	5	R/W	
			MOBY U file handler	133	R/W	
Transmission speed	BaudRate	ulong	19200 Bd	9	R/W	Selection depends on the communications module and Ident system being used. With this parameter, you set the transmission speed between the communications module and reader. When the RFID reader is connected: After changing the transmission speed, the reader must be turned off and on again (cycle power). When an optical reader is connected: The transmission speed selected here must match the transmission speed selected in the firmware of the reader.
			57600 Bd	13	R/W	
			115200 Bd	14	R/W	

RF120C

4

The Openness parameters for the "RF120C" module are described below.

Table 4-1 Parameters of the module "RF120C"; parameters of the parameter group "Readers"

Parameters in the configuration (TIA Portal)	Parameters in Openness	Data type in Openness	Parameter value in the configuration (TIA Portal)	Parameter value in Openness	Default access	Description
Diagnostics messages	Diagnostic-Messages	int	None	1	R/W	With this parameter, you set whether hardware diagnostics messages will be reported. • None: Apart from standard diagnostics, no other alarms are generated. • Hard errors: Critical hardware errors are reported by the S7 diagnostics.
			Hard errors	2	R/W	
User mode	UserMode	ulong	Ident profile	3	R	Selection depends on the communications module and Ident system being used. With this parameter, you select the block: • Ident profile The program block for the Ident profile is used on the controller.

Parameters in the configuration (TIA Portal)	Parameters in Openness	Data type in Openness	Parameter value in the configuration (TIA Portal)	Parameter value in Openness	Default access	Description
Ident device / system	IdentDeviceOrSystem	int	RF200 general	53	R/W	Selection of the connected Ident device / system. Depending on the selection you make, the "Ident system" parameter group is adapted.
			RF290R	69	R/W	
			RF300 general	85	R/W	
			RF380R	101	R/W	
			MOBY U	5	R/W	
			General Reader	197	R/W	
			Parameters via FB / optical readers	214	R/W	
			RF600 [1]	117	R/W	
			SLG D10S [1]	21	R/W	
			SLG D11S/ D12S [1]	37	R/W	

[1] The sub-parameters of these parameter are not supported by Openness.

The Openness parameters of the parameter group "Ident device/system" are described below.

Table 4-2 Parameters of the module "RF120C"; parameters of the parameter group "Ident device/system: RF200 general"

UI parameter	Openness parameter	Data type in Openness	UI parameter value	Openness parameter value	Default access	Description
Transmission speed	BaudRate	ulong	19.2 kBd	9	R/W	Selection depends on the communications module and Ident system being used. Note that the value specified here is adopted automatically from the device configuration of the connected devices. With this parameter, you set the transmission speed between the communications module and reader. When the RFID reader is connected: After changing the transmission speed, the reader must be turned off and on again (cycle power). When an optical reader is connected: The transmission speed selected here must match the transmission speed selected in the firmware of the reader.
			57.6 kBd	13	R/W	
			115.2 kBd	14	R/W	

UI parameter	Openness parameter	Data type in Openness	UI parameter value	Openness parameter value	Default access	Description
Presence check	Presence-Check	ulong	On	1	R/W	On = As soon as there is a transponder in the antenna field of the reader, its presence is reported. Off = The presence check on the FB is suppressed. The antenna on the reader is nevertheless turned on as long as it has not been turned off by a command.
			Off	0	R/W	
Reset ERR LED	ResetErrorLED	int	On	2	R/W	On = the flashing of the error LED on the communications module is reset by each FB reset. Off = the error LED always indicates the last error. The display can only be reset by turning off the communications module.
			Off	0	R/W	
Max. number of transponders	MaxNoOf-Transponders	int	1	<number>	R	Number of transponders expected in the antenna field. The selection depends on the connected device.
Transponder type	Transponder-Type	int	ISO 15693	1	R	Selection of the transponder types used. The selection depends on the connected device.

Table 4-3 Parameters of the module "RF120C"; parameters of the parameter group "Ident device/system: RF290R"

UI parameter	Openness parameter	Data type in Openness	UI parameter value	Openness parameter value	Default access	Description
Transmission speed	BaudRate	ulong	19.2 kBd	9	R/W	Selection depends on the communications module and Ident system being used. Note that the value specified here is adopted automatically from the device configuration of the connected devices. With this parameter, you set the transmission speed between the communications module and reader. When the RFID reader is connected: After changing the transmission speed, the reader must be turned off and on again (cycle power). When an optical reader is connected: The transmission speed selected here must match the transmission speed selected in the firmware of the reader.
			57.6 kBd	13	R/W	
			115.2 kBd	14	R/W	
Presence check	Presence-Check	ulong	On	1	R/W	On = As soon as there is a transponder in the antenna field of the reader, its presence is reported. Off = The presence check on the FB is suppressed. The antenna on the reader is nevertheless turned on as long as it has not been turned off by a command.
			Off	0	R/W	
Reset ERR LED	ResetErrorLED	int	On	2	R/W	On = the flashing of the error LED on the communications module is reset by each FB reset. Off = the error LED always indicates the last error. The display can only be reset by turning off the communications module.
			Off	0	R/W	
HF power	RfPower	double	0.50 ... 5.00	<text>	R/W	Setting for the output power of the reader. The selectable values depend on the connected device.

UI parameter	Openness parameter	Data type in Openness	UI parameter value	Openness parameter value	Default access	Description
Max. number of transponders	MaxNoOfTransponders	int	1	<number>	R	Number of transponders expected in the antenna field. The selection depends on the connected device.
Transponder type	TransponderType	int	ISO 15693	1	R	Selection of the transponder types used. The selection depends on the connected device.

Table 4-4 Parameters of the module "RF120C"; parameters of the parameter group "Ident device/system: RF300 general"

UI parameter	Openness parameter	Data type in Openness	UI parameter value	Openness parameter value	Default access	Description
Transmission speed	BaudRate	ulong	19.2 kBd	9	R/W	Selection depends on the communications module and Ident system being used. Note that the value specified here is adopted automatically from the device configuration of the connected devices. With this parameter, you set the transmission speed between the communications module and reader. When the RFID reader is connected: After changing the transmission speed, the reader must be turned off and on again (cycle power). When an optical reader is connected: The transmission speed selected here must match the transmission speed selected in the firmware of the reader.
			57.6 kBd	13	R/W	
			115.2 kBd	14	R/W	

UI parameter	Openness parameter	Data type in Openness	UI parameter value	Openness parameter value	Default access	Description
Presence check	Presence-Check	ulong	On	1	R/W	On = As soon as there is a transponder in the antenna field of the reader, its presence is reported. Off (RF field on) = the presence check in the FB is suppressed. The antenna on the reader is nevertheless turned on as long as it has not been turned off by a command. Off (RF field off) = the antenna is turned on only when a command is sent and it then turns itself off again.
			Off (RF field on)	3	R/W	
			Off (RF field off)	2	R/W	
Reset ERR LED	ResetErrorLED	int	On	2	R/W	On = the flashing of the error LED on the communications module is reset by each FB reset. Off = the error LED always indicates the last error. The display can only be reset by turning off the communications module.
			Off	0	R/W	
Max. number of transponders	MaxNoOf-Transponders	int	1	<number>	R	Number of transponders expected in the antenna field. The selection depends on the connected device.
Transponder type	Transponder-Type	int	RF300	5	R/W	Selection of the transponder types used. The selection depends on the connected device.
			ISO 15693	1	R/W	

Table 4-5 Parameters of the module "RF120C"; parameters of the parameter group "Ident device/system: RF380R"

UI parameter	Openness parameter	Data type in Openness	UI parameter value	Openness parameter value	Default access	Description
Transmission speed	BaudRate	ulong	19.2 kBd	9	R/W	Selection depends on the communications module and Ident system being used. Note that the value specified here is adopted automatically from the device configuration of the connected devices. With this parameter, you set the transmission speed between the communications module and reader. When the RFID reader is connected: After changing the transmission speed, the reader must be turned off and on again (cycle power). When an optical reader is connected: The transmission speed selected here must match the transmission speed selected in the firmware of the reader.
			57.6 kBd	13	R/W

Presence check	Presence-Check	ulong	On	1	R/W	On = As soon as there is a transponder in the antenna field of the reader, its presence is reported. Off (RF field on) = the presence check in the FB is suppressed. The antenna on the reader is nevertheless turned on as long as it has not been turned off by a command. Off (RF field off) = the antenna is turned on only when a command is sent and it then turns itself off again.
			Off (RF field on)	3	R/W	
			Off (RF field off)	2	R/W	
Reset ERR LED	ResetErrorLED	int	On	2	R/W	On = the flashing of the error LED on the communications module is reset by each FB reset. Off = the error LED always indicates the last error. The display can only be reset by turning off the communications module.
			Off	0	R/W	
HF power	RfPower	double	0.50 ... 5.00	<text>	R/W	Setting for the output power of the reader. The selectable values depend on the connected device.

UI parameter	Openness parameter	Data type in Openness	UI parameter value	Openness parameter value	Default access	Description
Max. number of transponders	MaxNoOfTransponders	int	1	<number>	R	Number of transponders expected in the antenna field. The selection depends on the connected device.
Transponder type	TransponderType	int	RF300	5	R/W	Selection of the transponder types used. The selection depends on the connected device.
			ISO 15693	1	R/W	

Table 4-6 Parameters of the module "RF120C"; parameters of the parameter group "Ident device/system: General Reader"

UI parameter	Openness parameter	Data type in Openness	UI parameter value	Openness parameter value	Default access	Description
Transmission speed	BaudRate	ulong	19.2 kBd	9	R/W	Selection depends on the communications module and Ident system being used. Note that the value specified here is adopted automatically from the device configuration of the connected devices. With this parameter, you set the transmission speed between the communications module and reader. When the RFID reader is connected: After changing the transmission speed, the reader must be turned off and on again (cycle power). When an optical reader is connected: The transmission speed selected here must match the transmission speed selected in the firmware of the reader.
			57.6 kBd	13	R/W	
			115.2 kBd	14	R/W	
Byte sequence of the reset parameter	ByteSequenceHex	byte[]	[1]	<text>	R/W	Byte sequence of the reset parameter of the reader.

[1] For a detailed description of this parameter, see the following paragraph.

Table 4-7 Parameters of the module "RF120C"; parameters of the parameter group "Ident device/system: Parameters via FB / optical readers"

UI parameter	Openness parameter	Data type in Openness	UI parameter value	Openness parameter value	Default access	Description
Transmission speed	BaudRate	ulong	19.2 kBd	9	R/W	Selection depends on the communications module and Ident system being used. Note that the value specified here is adopted automatically from the device configuration of the connected devices. With this parameter, you set the transmission speed between the communications module and reader. When the RFID reader is connected: After changing the transmission speed, the reader must be turned off and on again (cycle power). When an optical reader is connected: The transmission speed selected here must match the transmission speed selected in the firmware of the reader.
			57.6 kBd	13	R/W	
			115.2 kBd	14	R/W	
MOBY mode	MobyMode	ulong	RF200/ RF300/ RF600; MV4x0; MOBY U/D	5	R	With this parameter, you set the mode of the communications module.

The parameter "Byte sequence of the reset parameter"

With this function, you can specify the Reset parameter using a byte array (16). This setting is intended only for trained users.

The following Reset parameters are available:

Table 4-8 Reset parameters

Byte	1	2...5	6	7...8	9	10	11	12	13...14	15	16
Value	0x04	0x00	0x0A	0x00	scanning_ time	param	option_1	distance_ limiting	multitag	field_on_ control	field_on_ time

RF170C

5

The Openness parameters for the "RF170C" module are described below.

Table 5-1 Parameters of the module "RF170C"; parameters of the parameter group "Module parameters"

Parameters in the configuration (TIA Portal)	Parameters in Openness	Data type in Openness	Parameter value in the configuration (TIA Portal)	Parameter value in Openness	Default access	Description
User mode	UserMode	ulong	Ident profile/ RFID standard profile	3	R/W	Selection depends on the communications module and Ident system being used. With this parameter, you select the block: • Ident profile/RFID standard profile: The program block for the Ident profile/RFID standard profile is used on the controller. • FB 45 / FC 45: Single tag mode FB 45 (PROFIBUS/PROFINET) or FC 45 (PROFIBUS) is used on the controller. • FB 55 / FC 55: Multitag mode. FB 55 (PROFIBUS/PROFINET) or FC 55 (PROFIBUS) is used on the controller.
			FB 45 / FC 45	1	R/W	
			FB 55 / FC 55	4	R/W	

Parameters in the configuration (TIA Portal)	Parameters in Openness	Data type in Openness	Parameter value in the configuration (TIA Portal)	Parameter value in Openness	Default access	Description
MOBY mode	MobyMode	ulong	RF200/RF300/RF600; MV4x0; MOBY U/D	5	R/W	Selection depends on the communications module and Ident system being used. With this parameter, you set the mode of the communications module. • RF200/RF300/RF600; MV4x0; MOBY U/D • MOBY I/E • MV3xx • Freeport protocol • RF300 filehandler Normal addressing: The transponder is addressed with physical addresses. Filehandler: Prior to use, the transponder needs to be formatted.
			MOBY I/E	1	R/W	
			MV3xx	16	R/W	
			Freeport protocol	17	R/W	
			RF300 filehandler	149	R/W	
Transmission speed	BaudRate	ulong	19.2 kBd	9	R/W	Selection depends on the communications module and Ident system being used. With this parameter, you set the transmission speed between the communications module and reader. When the RFID reader is connected: After changing the transmission speed, the reader must be turned off and on again (cycle power). When an optical reader is connected: The transmission speed selected here must match the transmission speed selected in the firmware of the reader.
			57.6 kBd	13	R/W	
			115.2 kBd	14	R/W	

Parameters in the configuration (TIA Portal)	Parameters in Openness	Data type in Openness	Parameter value in the configuration (TIA Portal)	Parameter value in Openness	Default access	Description
Diagnostics messages	Diagnostic-Messages	int	None	1	R/W	Selection depends on the communications module and Ident system being used. With this parameter, you set whether hardware diagnostics messages will be reported. • None: Apart from standard diagnostics, no other alarms are generated. • Hard errors: Critical hardware errors are reported by the S7 diagnostics.
			Hard errors	2	R/W	
Suppression of Error LED	SuppressionOfErrorLed	int	None	0	R/W	Disabling the Error LED (ERR) of a channel. The communications module has two channels to which the readers / optical readers can be connected. The Error LED of the other channel flashes permanently when only one of the channels is being used. With the help of the suppression, you can disable the Error LED of the unused channel.
			Channel 1	1	R/W	
			Channel 2	2	R/W	
Interface	ModuleInterface	int	RS232	1	R	Selection of the interface type that the connected hardware (reader / optical reader) uses.
			RS422	0	R	

Table 5-2 Parameters of the module "RF170C"; parameters of the parameter group "Freeport protocol"

UI parameter	Openness parameter	Data type in Openness	UI parameter value	Openness parameter value	Default access	Description
Data bits	DataBits	ulong	7	7	R/W	Selection of the number of bits on which a character is represented.
			8	8	R/W	

UI parameter	Openness parameter	Data type in Openness	UI parameter value	Openness parameter value	Default access	Description
Parity	Parity	ulong	None	0	R/W	Parity selection A sequence of data bits can be expanded by a parity bit. With its value "0" or "1", the parity bit is added to the sum of all bits (data bits and parity bits) to form a defined status. This increases data reliability. • None: Data is sent without a parity bit. • Odd: The parity bit is set so that the sum of the data bits (including the parity bit) is odd when the signal state is "1". • Even: The parity bit is set so that the sum of the data bits (including the parity bit) is even when the signal state is "1". • Fixed value 1: The parity bit is set permanently to the value "1". • Fixed value 0: The parity bit is set permanently to the value "0".
			Odd	1	R/W	
			Even	2	R/W	
			Fixed value 1	3	R/W	
			Fixed value 0	7	R/W	
Stop bits	StopBits	ulong	1	1	R/W	Selection of the number of stop bits that indicate the end of a character. The stop bits are appended to every transferred character during transmission.
			2	2	R/W	

UI parameter	Openness parameter	Data type in Openness	UI parameter value	Openness parameter value	Default access	Description
Specifying end detection	EndDetectionOfAReceivedFrame	ulong	After character delay time elapses	16	R/W	Specifies the end detection of a received frame. • After character delay time elapses: The frame has neither a fixed length nor defined end delimiters. The end of a frame is indicated by a gap in the character sequence. The size of this gap is specified by the character delay time. • On receipt of fixed number of characters: The length of the received frame is always the same. When data is received, the end of the frame is recognized when the set number of characters has been received. • On receipt of the end delimiter(s): At the end of the frame there are one or two defined end delimiters. When data is received, the end of the frame is recognized when the configured end delimiter(s) is/are received.
			On receipt of fixed number of characters	32	R/W	
			On receipt of the end delimiter(s):	49	R/W	
No. of end delimiters	NumberOfEndDelimiters	ulong	1	1	R/W	Selection of the number of end delimiters. A maximum of 2 end delimiters can be configured. When data is received, the end of the frame is recognized when the selected end delimiter combination is received.
			2	2	R/W	
1st end delimiter	FirstEndDelimiterReceiver	ulong	0...7F / 0...FF	<text>	R/W	Entry of the 1st end delimiter of maximum two end delimiters for end criteria "On receipt of the end delimiter(s)". The selected end delimiter or the selected end delimiter combination limits the length of the frame. Parameter value depending on the "Data bits" parameter.

UI parameter	Openness parameter	Data type in Openness	UI parameter value	Openness parameter value	Default access	Description
2nd end delimiter	SecondEndDelimiterReceiver	ulong	0...7F / 0...FF	<text>	R	Entry of the 2nd end delimiter of maximum two end delimiters for end criteria "On receipt of the end delimiter(s)". The selected end delimiter or the selected end delimiter combination limits the length of the frame. Parameter value depending on the "Data bits" parameter.
Frame length	FrameLength	ulong	1...233 / 1...229	<text>	R	Entry of the frame length in bytes for the end criterion "On receipt of fixed number of characters".
Character delay time	CharacterDelayTime	ulong	0...65535	<text>	R	Entry of the time that may elapse until a frame end is recognized. Select the character delay time dependent on the send behavior of your communications partner. Depending on the data transmission speed the character delay time is limited to a minimum value. Note that the ASCII driver also pauses between two telegrams during transmission.

RF180C

6

The Openness parameters for the "RF180C" module are described below.

Table 6-1 Parameters of the module "RF180C"

Parameters in the configuration (TIA Portal)	Parameters in Openness	Data type in Openness	Parameter value in the configuration (TIA Portal)	Parameter value in Openness	Default access	Description
User mode	UserMode	ulong	FB 45	1	R/W	Selection depends on the communications module and Ident system being used. With this parameter, you select the block: • FB 45: Single tag mode FB 45 (PROFIBUS/PROFINET) is used in the controller. • FB 55: Multitag mode. FB 55 (PROFIBUS/PROFINET) is used on the controller. • FB 56: Multitag mode. FB 56 (PROFIBUS/PROFINET) is used on the controller. • RFID standard profile The program block for the RFID standard profile is used on the controller.
			FB 55	4	R/W	
			FB 56	5	R/W	
			RFID standard profile	3	R/W	

Parameters in the configuration (TIA Portal)	Parameters in Openness	Data type in Openness	Parameter value in the configuration (TIA Portal)	Parameter value in Openness	Default access	Description
MOBY mode	MobyMode	ulong	MOBY I/E normal addressing	1	R/W	Selection depends on the communications module and Ident system being used. With this parameter, you set the mode of the communications module. • MOBY I/E normal addressing • MOBY I file handler • RF200/RF300/RF600; MOBY U/D normal addr. • MOBY U file handler • RF300 filehandler Normal addressing: The transponder is addressed with physical addresses. Filehandler: Prior to use, the transponder needs to be formatted.
			MOBY I file handler	129	R/W	
			RF200/RF300/RF600; MV4x0; MOBY U/D normal add.	5	R/W	
			MOBY U file handler	133	R/W	
			RF300 filehandler	149	R/W	
Transmission speed	BaudRate	ulong	19.2 kBd	9	R/W	Selection depends on the communications module and Ident system being used. With this parameter, you set the transmission speed between the communications module and reader. When the RFID reader is connected: After changing the transmission speed, the reader must be turned off and on again (cycle power). When an optical reader is connected: The transmission speed selected here must match the transmission speed selected in the firmware of the reader.
			57.6 kBd	13	R/W	
			115.2 kBd	14	R/W	

Parameters in the configuration (TIA Portal)	Parameters in Openness	Data type in Openness	Parameter value in the configuration (TIA Portal)	Parameter value in Openness	Default access	Description
Diagnostics messages	Diagnostic-Messages	int	None	1	R/W	With this parameter, you set whether hardware diagnostics messages will be reported. • None: Apart from standard diagnostics, no other alarms are generated. • Hard errors: Critical hardware errors are reported by the S7 diagnostics. • Hard/Soft Errors: Critical hardware faults and errors occurring when processing commands are reported by the S7 diagnostics.
			Hard errors	2	R/W	
			Hard/soft errors	4	R/W	
Suppression of Error LED	SuppressionOfErrorLed	int	None	0	R/W	Disabling the Error LED (ERR) of a channel. The communications module has two channels to which the readers / optical readers can be connected. The Error LED of the other channel flashes permanently when only one of the channels is being used. With the help of the suppression, you can disable the Error LED of the unused channel.
			Channel 1	1	R/W	
			Channel 2	2	R/W	

RF166C

7

The Openness parameters for the "RF166C" module are described below.

Table 7-1 Parameters of the module "RF166C"; parameters of the parameter group "Basic parameter"

Parameters in the configuration (TIA Portal)	Parameters in Openness	Data type in Openness	Parameter value in the configuration (TIA Portal)	Parameter value in Openness	Default access	Description
User mode	UserMode	ulong	Ident profile/ RFID standard profile	3	R/W	Selection depends on the communications module and Ident system being used. With this parameter, you select the block: • Ident profile/RFID standard profile: The program block for the Ident profile/RFID standard profile is used on the controller.

Table 7-2 Parameters of the "RF166C" module; parameters of the submodules of the parameter group "Module parameters"

Parameters in the configuration (TIA Portal)	Parameters in Openness	Data type in Openness	Parameter value in the configuration (TIA Portal)	Parameter value in Openness	Default access	Description
CM module						
User mode	UserMode	ulong	FB 45	1	R/W	Selection depends on the communications module and Ident system being used. With this parameter, you select the block: • FB 45: Single tag mode FB 45 (PROFIBUS/PROFINET) is used in the controller. • Ident profile/RFID standard profile: The program block for the Ident profile/RFID standard profile is used on the controller.
			Ident profile/ RFID standard profile	3	R/W	

Parameters in the configuration (TIA Portal)	Parameters in Openness	Data type in Openness	Parameter value in the configuration (TIA Portal)	Parameter value in Openness	Default access	Description
Reader						
User mode	UserMode	ulong	FB 45	1	R/W	Selection depends on the communications module and Ident system being used. With this parameter, you select the block: • FB 45: Single tag mode FB 45 (PROFIBUS/PROFINET) is used in the controller. • Ident profile/RFID standard profile: The program block for the Ident profile/RFID standard profile is used on the controller.
			Ident profile/ RFID standard profile	3	R/W	
MOBY mode	MobyMode	ulong	RF200/RF300/ RF600; MV4x0; MOBY U/D normal add.	5	R	Selection depends on the communications module and Ident system being used. With this parameter, you set the mode of the communications module. • RF200/RF300/RF600; MOBY U/D normal addr. Normal addressing: The transponder is addressed with physical addresses. Filehandler: Prior to use, the transponder needs to be formatted.

Parameters in the configuration (TIA Portal)	Parameters in Openness	Data type in Openness	Parameter value in the configuration (TIA Portal)	Parameter value in Openness	Default access	Description
Transmission speed	BaudRate	ulong	19.2 kBd	9	R/W	Selection depends on the communications module and Ident system being used. With this parameter, you set the transmission speed between the communications module and reader. When the RFID reader is connected: After changing the transmission speed, the reader must be turned off and on again (cycle power). When an optical reader is connected: The transmission speed selected here must match the transmission speed selected in the firmware of the reader.
			57.6 kBd	13	R/W	
			115.2 kBd	14	R/W	
Diagnostics messages	Diagnostic-Messages	int	None	1	R/W	With this parameter, you set whether hardware diagnostics messages will be reported. • None: Apart from standard diagnostics, no other alarms are generated. • Hard errors: Critical hardware errors are reported by the S7 diagnostics. • Hard/Soft errors: Critical hardware errors and errors that occur during command processing are reported by the S7 diagnostics.
			Hard errors	2	R/W	
			Hard/soft errors	4	R/W	
RF300						

Parameters in the configuration (TIA Portal)	Parameters in Openness	Data type in Openness	Parameter value in the configuration (TIA Portal)	Parameter value in Openness	Default access	Description
User mode	UserMode	ulong	FB 45	1	R/W	Selection depends on the communications module and Ident system being used. With this parameter, you select the block: • FB 45: Single tag mode FB 45 (PROFIBUS/PROFINET) is used in the controller. • Ident profile/RFID standard profile: The program block for the Ident profile/RFID standard profile is used on the controller.
			Ident profile/ RFID standard profile	3	R/W	
Diagnostics messages	Diagnostic-Messages	int	None	1	R/W	With this parameter, you set whether hardware diagnostics messages will be reported. • None: Apart from standard diagnostics, no other alarms are generated. • Hard errors: Critical hardware errors are reported by the S7 diagnostics. • Hard/Soft errors low priority: Critical hardware errors and errors that occur during command processing are reported by the S7 diagnostics.
			Hard errors	2	R/W	
			Hard/soft errors	4	R/W	
RF600						

Parameters in the configuration (TIA Portal)	Parameters in Openness	Data type in Openness	Parameter value in the configuration (TIA Portal)	Parameter value in Openness	Default access	Description
User mode	UserMode	ulong	FB 45	1	R/W	Selection depends on the communications module and Ident system being used. With this parameter, you select the block: • FB 45: Single tag mode FB 45 (PROFIBUS/PROFINET) is used in the controller. • Ident profile/RFID standard profile: The program block for the Ident profile/RFID standard profile is used on the controller.
			Ident profile/ RFID standard profile	3	R/W	
Transmission speed	BaudRate	ulong	19.2 kBd	9	R/W	Selection depends on the communications module and Ident system being used. With this parameter, you set the transmission speed between the communications module and reader. When the RFID reader is connected: After changing the transmission speed, the reader must be turned off and on again (cycle power). When an optical reader is connected: The transmission speed selected here must match the transmission speed selected in the firmware of the reader.
			57.6 kBd	13	R/W	
			115.2 kBd	14	R/W	

Parameters in the configuration (TIA Portal)	Parameters in Openness	Data type in Openness	Parameter value in the configuration (TIA Portal)	Parameter value in Openness	Default access	Description
Diagnostics messages	Diagnostic-Messages	int	None	1	R/W	With this parameter, you set whether hardware diagnostics messages will be reported. • None: Apart from standard diagnostics, no other alarms are generated. • Hard errors: Critical hardware errors are reported by the S7 diagnostics. • Hard/Soft errors low priority: Critical hardware errors and errors that occur during command processing are reported by the S7 diagnostics.
			Hard errors	2	R/W	
			Hard/soft errors	4	R/W	

RF18xC/RF18xCI

8

The Openness parameters for the "RF185C/RF186C/RF188C" and the "RF186CI/RF188CI" modules are described below.

Table 8-1 Parameters of the modules "RF18xC/RF18xCI"; parameters of the parameter group "Basic parameter"

Parameters in the configuration (TIA Portal)	Parameters in Openness	Data type in Openness	Parameter value in the configuration (TIA Portal)	Parameter value in Openness	Default access	Description
User mode	UserMode	ulong	Ident profile/ RFID standard profile	3	R/W	Selection depends on the communications module and Ident system being used. With this parameter, you select the block: • Ident profile/RFID standard profile: The program block for the Ident profile/RFID standard profile is used on the controller.

Table 8-2 Parameters of the "RF18xC/RF18xCI" modules; parameters of the parameter group "Module parameters"

Parameters in the configuration (TIA Portal)	Parameters in Openness	Data type in Openness	Parameter value in the configuration (TIA Portal)	Parameter value in Openness	Default access	Description
IID device						
Diagnostic interrupt	Diagnostic-Messages	int	Off	1	R/W	Switching diagnostic messages of the communication modules on and off.
			On	2	R/W	

Table 8-3 Parameters of the "RF185C/RF186C/RF188C" modules; parameters of the submodules of the parameter group "Module parameters"

Parameters in the configuration (TIA Portal)	Parameters in Openness	Data type in Openness	Parameter value in the configuration (TIA Portal)	Parameter value in Openness	Default access	Description
CM module						
User mode	UserMode	ulong	FB 45	1	R/W	Selection depends on the communications module and Ident system being used. With this parameter, you select the block: • FB 45: Single tag mode FB 45 (PROFIBUS/PROFINET) is used in the controller. • Ident profile/RFID standard profile: The program block for the Ident profile/RFID standard profile is used on the controller.
			Ident profile/ RFID standard profile	3	R/W	
Reader						
User mode	UserMode	ulong	FB 45	1	R/W	Selection depends on the communications module and Ident system being used. With this parameter, you select the block: • FB 45: Single tag mode FB 45 (PROFIBUS/PROFINET) is used in the controller. • Ident profile/RFID standard profile: The program block for the Ident profile/RFID standard profile is used on the controller.
			Ident profile/ RFID standard profile	3	R/W	

Parameters in the configuration (TIA Portal)	Parameters in Openness	Data type in Openness	Parameter value in the configuration (TIA Portal)	Parameter value in Openness	Default access	Description
MOBY mode	MobyMode	ulong	RF200/RF300/RF600; MV4x0; MOBY U/D normal add.	5	R	Selection depends on the communications module and Ident system being used. With this parameter, you set the mode of the communications module. • RF200/RF300/RF600; MOBY U/D normal addr. Normal addressing: The transponder is addressed with physical addresses. Filehandler: Prior to use, the transponder needs to be formatted.
Transmission speed	BaudRate	ulong	19.2 kBd	9	R/W	Selection depends on the communications module and Ident system being used. With this parameter, you set the transmission speed between the communications module and reader. When the RFID reader is connected: After changing the transmission speed, the reader must be turned off and on again (cycle power). When an optical reader is connected: The transmission speed selected here must match the transmission speed selected in the firmware of the reader.
			57.6 kBd	13	R/W	
			115.2 kBd	14	R/W	

Parameters in the configuration (TIA Portal)	Parameters in Openness	Data type in Openness	Parameter value in the configuration (TIA Portal)	Parameter value in Openness	Default access	Description
Diagnostics messages	Diagnostic-Messages	int	None	1	R/W	With this parameter, you set whether hardware diagnostics messages will be reported. • None: Apart from standard diagnostics, no other alarms are generated. • Hard errors: Critical hardware errors are reported by the S7 diagnostics. • Hard/Soft Errors: Critical hardware faults and errors occurring when processing commands are reported by the S7 diagnostics.
			Hard errors	2	R/W	
			Hard/soft errors	4	R/W	
IO mode	IIDIoMode	int	Input	2	R/W	With this parameter, you define the mode of the IO interface of the communication module: • Input: Single digital input • Output: Single digital output • IO-Link: Mode for connecting an IO-Link device with digital inputs/outputs.
			Output	3	R/W	
			IO-Link	4	R/W	

Table 8-4 Parameters of the "RF186CI/RF188CI" modules; parameters of the submodules of the parameter group "Module parameters"

Parameters in the configuration (TIA Portal)	Parameters in Openness	Data type in Openness	Parameter value in the configuration (TIA Portal)	Parameter value in Openness	Default access	Description
CM module						
User mode	UserMode	ulong	FB 45	1	R/W	Selection depends on the communications module and Ident system being used. With this parameter, you select the block: • FB 45: Single tag mode FB 45 (PROFIBUS/PROFINET) is used in the controller. • Ident profile/RFID standard profile: The program block for the Ident profile/RFID standard profile is used on the controller.
			Ident profile/ RFID standard profile	3	R/W	
DI/DO module						
IO mode	IIDIoMode	int	Input	2	R/W	With this parameter, you define the mode of the IO interface of the communication module: • Input: Single digital input • Output: Single digital output • IO-Link: Mode for connecting an IO-Link device with digital inputs/outputs.
			Output	3	R/W	
			IO-Link	4	R/W	
Reader						

Parameters in the configuration (TIA Portal)	Parameters in Openness	Data type in Openness	Parameter value in the configuration (TIA Portal)	Parameter value in Openness	Default access	Description
User mode	UserMode	ulong	FB 45	1	R/W	Selection depends on the communications module and Ident system being used. With this parameter, you select the block: • FB 45: Single tag mode FB 45 (PROFIBUS/PROFINET) is used in the controller. • Ident profile/RFID standard profile: The program block for the Ident profile/RFID standard profile is used on the controller.
			Ident profile/ RFID standard profile	3	R/W	
MOBY mode	MobyMode	ulong	RF200/RF300/ RF600; MV4x0; MOBY U/D normal add.	5	R	Selection depends on the communications module and Ident system being used. With this parameter, you set the mode of the communications module. • RF200/RF300/RF600; MOBY U/D normal addr. Normal addressing: The transponder is addressed with physical addresses. Filehandler: Prior to use, the transponder needs to be formatted.
Transmission speed	BaudRate	ulong	19.2 kBd	9	R/W	Selection depends on the communications module and Ident system being used. With this parameter, you set the transmission speed between the communications module and reader. When the RFID reader is connected: After changing the transmission speed, the reader must be turned off and on again (cycle power). When an optical reader is connected: The transmission speed selected here must match the transmission speed selected in the firmware of the reader.

RF61xR/RF68xR

9

The Openness parameters for the "RF61xR/RF68xR" modules are described below.

Table 9-1 Parameters of the modules "RF61xR/RF68xR"

Parameters in the configuration (TIA Portal)	Parameters in Openness	Data type in Openness	Parameter value in the configuration (TIA Portal)	Parameter value in Openness	Default access	Description
RFID read points alarm 1	RfidReadPointAlarm1	int	Off	0	R/W	Enabling/disabling read point-related diagnostics messages.
			On	1	R/W	
RFID read points alarm 2	RfidReadPointAlarm2	int	Off	0	R/W	
			On	1	R/W	
RFID read points alarm 3 [1)]	RfidReadPointAlarm3	int	Off	0	R/W	
			On	1	R/W	
RFID read points alarm 4 [1)]	RfidReadPointAlarm4	int	Off	0	R/W	
			On	1	R/W	

[1)] Only with RF680R

MV400/MV500

10

The Openness parameters for the "MV400/MV500" modules are described below.

Table 10-1 Parameters of the modules "MV400/MV500"

Parameters in the configuration (TIA Portal)	Parameters in Openness	Data type in Openness	Parameter value in the configuration (TIA Portal)	Parameter value in Openness	Default access	Description
Function block	FunctionBlock	int	FB79	0	R/W	With this parameter, you select the block: • FB79 Compatible with the "VS130-2" reader; Compatible controllers: S7-300 and S7-400 • Ident profile Complex Ident block with MV-specific blocks; Compatible controllers: S7-300, S7-400, S7-1200 and S7-1500
			Ident profile	1	R/W
